

## **NEW!!! OTTO DATA PLAN**

Independent of the BAS vendor, gain the ultimate in visibility with an OTTO Data Plan. Just plug a cellular-enabled OTTO gateway into your project's BAS network and instantly provide greater value to your customer. Plug it in during your TAB verification site visit and leave it connected as long as you want. Move from project to project as needed.

Don't wonder how (or if) systems are operating. See in real-time if air is flowing, if the boiler system is producing hot water, what's online, or what's not.
